Continental Motors, Inc. Telephone 800-326-0089	FAA Proposed Cylinder Airworthiness Directive	Distributor Information Bulletin August 13, 2013 DIB 2014-13 Page 1 of 1

To our valued Distributors,

The purpose of this Distributor Information Bulletin (DIB) is to provide clarity to the recent FAA proposed cylinder Airworthiness Directive (AD) involving Danbury Aerospace and its subsidiaries, Engine Components International (ECI) and Airmotive Engineering Corporation (AEC). AEC is a sister company of ECI and the Parts Manufacturing Approval (PMA) holder of the TITAN cylinder.

Continental Motors has never used either AEC or ECI as a supplier of cylinder parts or components. Therefore, if you receive inquiries regarding this proposed AD, you can be confident that no AEC or ECI cylinder(s) has ever shipped from Continental Motors on engines or aftermarket spare parts. Your message should be clear that no Continental Motors factory new/rebuilt engines or parts are affected. However, be sure your customers understand if aftermarket cylinders produced by a source other than Continental Motors were installed after engine shipment from the factory, verification with ECI should be made. If you have customers that are unclear about the proposed AD and have additional questions, they may contact a member of Continental Motors' Customer Service at 888-826-5465 or 251-436-8299.

Additionally, in an attempt to negate the affect this proposed AD will have on the industry as a whole, Continental Motors is increasing production of the 520/550 cylinders in order to meet potential demand. Continental Motors will also waive any AOG fee during the next few months on 520/550 cylinders that are ordered as a result of this proposed AD.

If you have any questions, please submit a Synergy request through your Customer Portal at Synergy.ContinentalMotors.aero or contact Customer Service at 800-326-0089 or 251-436-8292
